

Borehamwood Sails

Client: Adecco UK Year of Completion: 2006
Main Contractor/Customer: Paragon Interiors

A call centre in Borehamwood was the location for the installation of four hypar sails designed and manufactured by Architen Landrell.

Positioned in a central atrium, the main purpose of the fabric features is to provide solar shading in a glass boxed space. By hanging from the atrium roof, they also provide a lowered ceiling above the companys canteen eating area, creating a more intimate space for those who sit below.

At night, the various size hypars are lit with LED lighting to deflect the light upwards and draw attention to the stylish atrium features.

The standard nature of the hypars made the installation a fairly straightforward process, however, access was tricky as there was no way to get any machinery in and out. Architen Landrells site crew solved this problem by employing their rope access skills to work high up in the atrium and by using very specialist machinery.

Location:
Borehamwood, UK

Category:
Interior

Market Sector:
Offices

Scope Of Works:
Manufacture
Project Management
Install

Fabric Type:
PVC Glass Mesh - Natte

Design Style:
Hypar
