

## East Winter Garden

Year of Completion: 2003

Main Contractor/Customer: Canary Wharf Contractors

Designers and developers of the East Winter Garden in London's Canary Wharf wanted to create a light and spacious environment for cocktail parties and sophisticated events.

A stunning view of the waterfront parade. The introduction of a white, sweeping fabric structure in the central atrium was therefore a stylish and fitting addition to the otherwise sparse space.

The installation which is a 23 metre long fabric membrane made from PVC coated glass fibre, stretches from one side of the glass atrium to the other.

The saddle style structure was attached to the walls using the building's steel structure to make the connection points.

**Location:**  
London, UK

**Category:**  
Interior

**Market Sector:**  
Entertainment  
Events

**Scope Of Works:**  
Design  
Engineering  
Manufacture
