

Haggerston Castle

Client: Bourne Leisure Year of Completion: 2006

Architect/Designer: Terry Glazebrook Main Contractor/Customer: Shepherd Construction

This piece of fabric architecture is a barrel vaulted walkway canopy that covers an amusement arcade and runs between two buildings of a 19th century stately home. The structure is part of a Bourne Leisure holiday park situated on the coast of Northumberland.

This barrel vaulted roof canopy provides weather protection for Bourne Leisures clients while they enjoy themselves at various games and activities. The design brief was to build a large activities hall between two 19th century buildings for the smallest possible budget. A mixture of glulam wooden beams, steel columns and tensile fabric was chosen for the structure. The main frame is formed from 15 curving wooden glulam beams supported on seven tubular steel columns with the load carried to these columns via tree heads on each column. By day the fabric membrane suffuses the space with light and by night the building glows with light from within.

Location:

Berwick-upon-Tweed, UK

Category:

Exterior
Maintenance

Market Sector:

Public Buildings
Entertainment
Sports and Leisure

Scope Of Works:

Design
Engineering
Manufacture
Project Management
Install
Maintenance

Fabric Type:

PVC - Fabric

Design Style:

Barrel Vault

Function:

Weather Protection
Solar shading
