

Architen Ripple

ARCHITEN  
LANDRELL

**Thoughtfully designed environments are essential to modern life; they can reduce stress, improve focus, and foster creativity by optimizing factors such as lighting, acoustics, and spatial layout**

## Architen Ripple

**Architen Ripple** is a simple yet transformative retrofit ceiling solution that enhances any space with minimal disruption and maximum impact.

Designed for both aesthetic impact and functionality, it offers practical benefits such as improved acoustics, integrated lighting, and effective screening, making it a versatile choice for a wide range of environments.

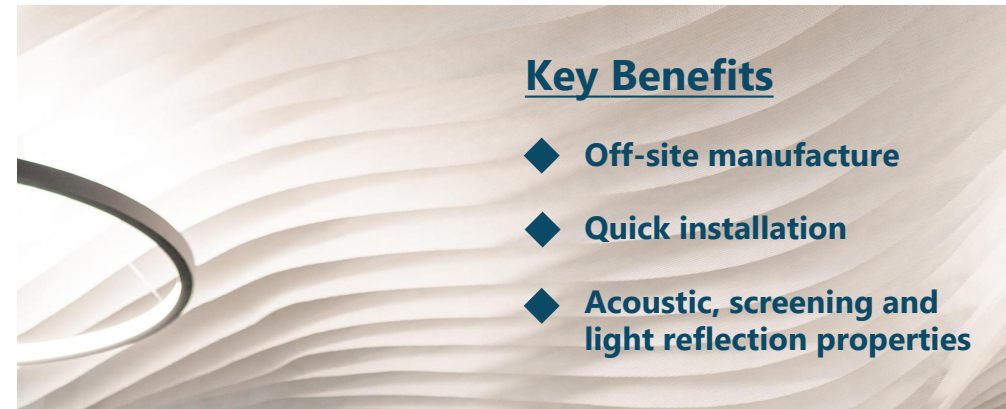

### Unique Product

Each Ripple Ceiling is uniquely designed to complement its surroundings, ensuring a tailored look that enhances both the visual appeal and the usability of the space. No fabric fin is the same and the variety of forms we can create means that your Ripple ceiling is as unique as your fingerprint.

Drawing on a wide range of material options, Architen Ripple can be adapted to suit your vision; whether it's transforming a space with an architectural feature ceiling, improving acoustics, adding a splash of colour, introducing branding or just concealing building services.

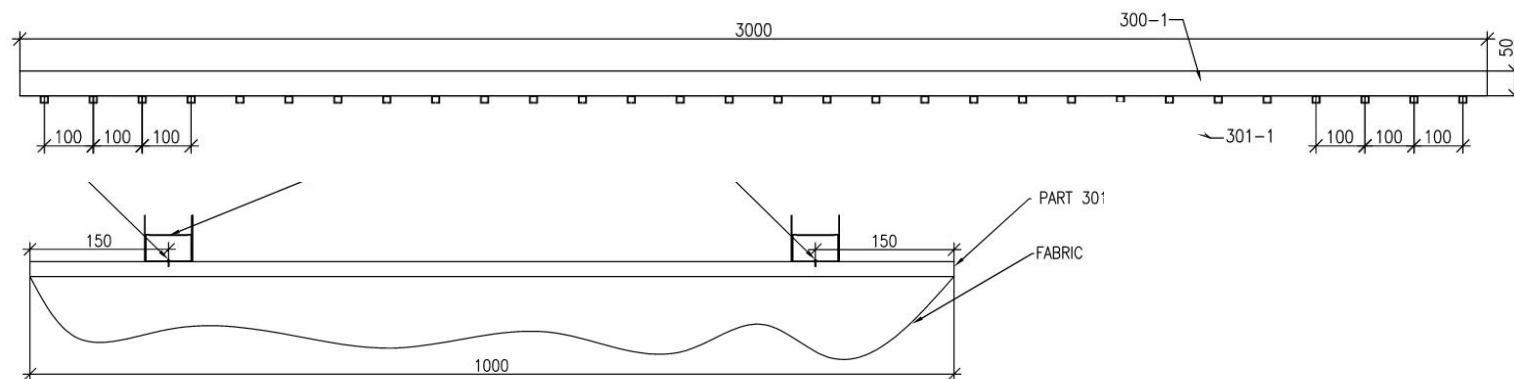

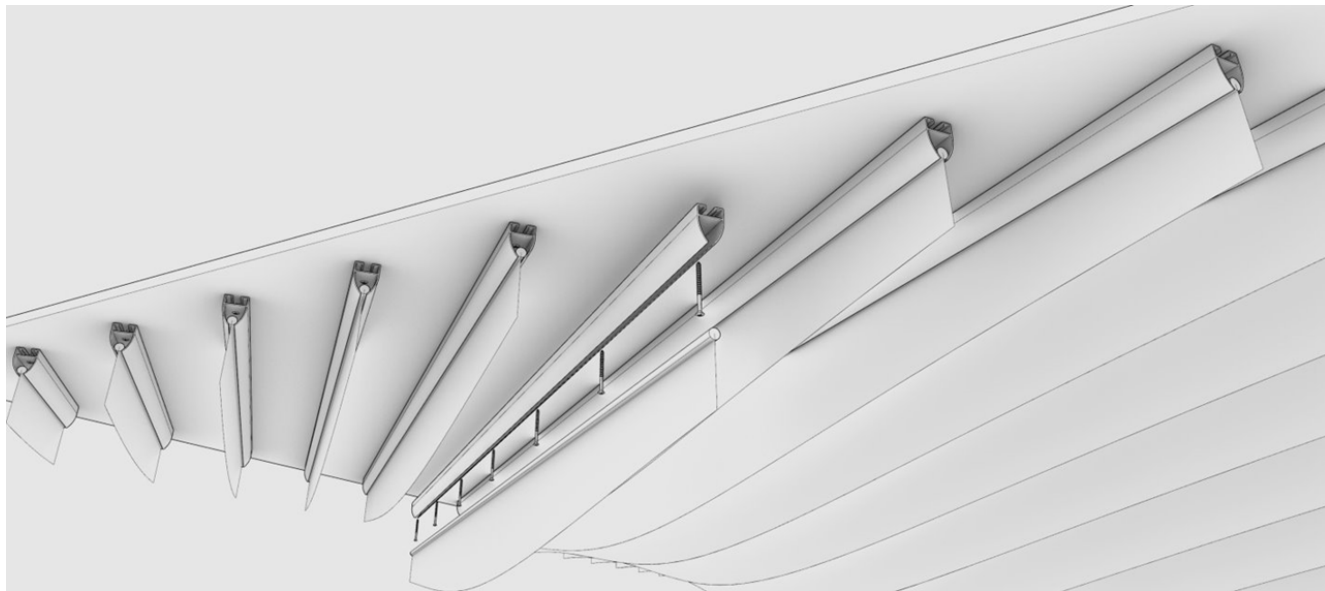

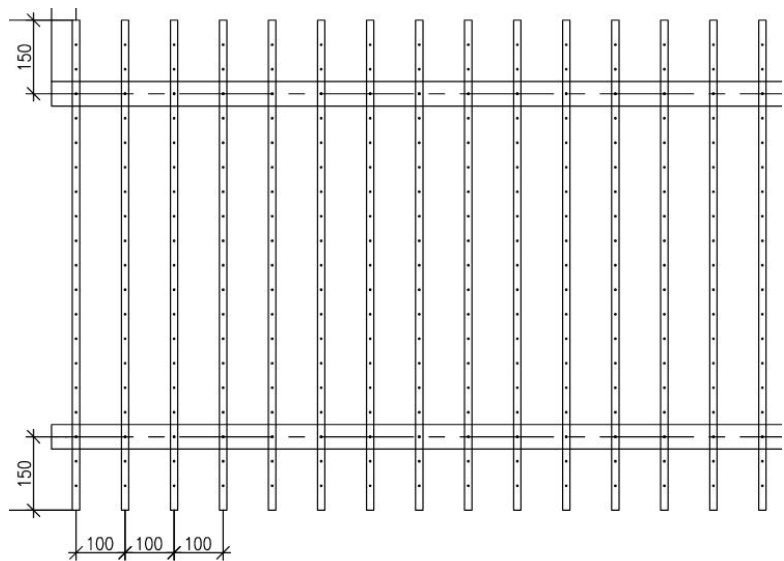

### Minimum Disruption, Maximum Impact

Fabricated entirely off-site, Architen Ripple is a kit of parts tailored to your space. It can be installed with hand tools and non-specialist labour meaning installation is quick and straightforward. No ongoing maintenance requirements and easy replacement of individual components also makes it a low cost option across its lifespan.

### Key Benefits

- ◆ Off-site manufacture
- ◆ Quick installation
- ◆ Acoustic, screening and light reflection properties

## The System at a Glance

Architen Ripple is a unique modular ceiling system, largely fabricated off-site using minimal components.

Lengths of slender extruded aluminium sections fix directly into any ceiling system. Fabric fins, cut and prepared in our specialist membrane factory, are slid into the aluminium sections to create the final product.

The layout of the aluminium sections can be adapted to accommodate existing lighting, smoke alarms and services.

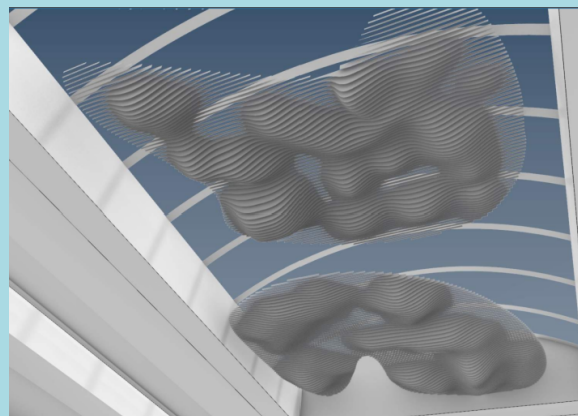

Depending on the choice of fabric, design of the fin profiles and the layout of the aluminium sections, a wide range of functional and architecturally beautiful options are possible.

## Unique Design

Every Architen Ripple ceiling is different, with each footprint and wave profile designed to fit your space, performance requirements and/or brand.

Layout, sizing and colour of the fabric fins can be used to create a logo, shape or image so be playful with your designs!

These suspended features using the Architen Ripple system, form the shape of Caribbean islands in plan, a reflection of the client's pride in the site location.

## Designed for Illumination

Architen Ripple is designed to work beautifully with lighting, whether a colour wash around the perimeter or illumination of individual fins, the light reflecting properties of the materials we offer help to create a beautiful soft glow which can be adapted to use.

## Acoustic Benefits

A wide range of material options are available for the Architen Ripple system, including interior architectural mesh membranes which bring a good level of acoustic performance. This makes Architen Ripple ideal for meeting spaces, open plan offices, large concourse areas or any space which needs a softer touch.

Talk to us about what material options best suit your environment.

## Maintenance Friendly

The Architen Ripple ceiling system is designed to fit around your existing services, concealing them from view but still allowing easy access for maintenance and operation. If required, fabric panels can be simply removed to create wider access to the ceiling above, then reinstated with no need for specialist labour.
