

Architen Landrell Environmental Policy

Architen Landrell is an organisation with an international reputation at the forefront of tensile architecture innovation. We specialise in employing the principles of structural membrane design to create landmark buildings and iconic features that provide insightful, creative and cost-effective solutions to traditional construction and fit-out design briefs.

Architen Landrell recognises that concern for the environment is an integral and fundamental part of its business operations and considers its main environmental impacts to be emissions arising from the use of energy, transport and materials. We will achieve environmental excellence through the implementation of an Environmental Management System which draws on the requirements of ISO 14001:2015 and associated standards, ensuring compliance with all relevant environmental legislation and minimising our environmental impact through appropriate monitoring and continuous improvement. This policy provides the guiding framework for that system.

In particular we will:

- Continually improve our environmental performance and prevention of pollution.
- Ensure compliance with all relevant local, national and international legislation and regulations while supporting all governmental policies for sustainable development.
- Monitor progress through objectives and targets in order to highlight actions required to prevent deficiencies.
- Train all staff to enhance their environmental awareness.
- Encourage sub-contractors and suppliers to adhere to our environmental standards.
- Communicate our environmental policy to all staff and stakeholders.

We are committed to reduce our environmental impacts and improve sustainability through:

- The minimisation of material and energy usage in all operations on and off site.
- Actively promoting the waste hierarchy treatment of reduce, reuse and recycle, and to ensure the safe disposal or destruction of waste where reuse or recycling is not possible or economically viable.
- Reducing the greenhouse gas emissions created as a result of both our direct and indirect activities.
- Innovation in design, manufacturing and installation to further reduce the environmental impact of the company's business activities.
- The provision of appropriate resources and the necessary training for staff, to ensure that they are able to fulfil the commitment given in this policy.

This policy will be reviewed at least annually and will form the basis of all future environmental improvements.
